LISTING OF THE CLAIMS

The following is a complete listing of all the claims in the application, with an indication of the status of each:

1 1. (Currently amended) A process for managing business, technical and operational data 2 which uses a single interface in a shared space environment over the Internet comprising 3 the steps of: 4 providing a supplier portal from which new guests indicate, using a Graphical 5 User Interface (GUI) of the supplier portal Web page, whether they are a registered user 6 or not; 7 determining whether a guest is a registered user from input by the guest, and if not 8 a registered user, prompting the guest to select "Register" to link to guest registration 9 (GR) where they can obtain a Web userid/password that enables them to register obtain user-level registration for any of global procurement applications available under the 10 11 supplier portal; 12 when a guest obtains a Web userid/password in GR, storing guest information in a 13 GR data store; 14 determining whether any applications have been authorized for a registered guest 15 and, if not, prompting the guest to register for restricted applications in a portal common 16 registration (PCR) where information is stored in a PCR data store throughout an 17 application's approval cycle; 18 accessing information from the GR data store to automatically build a customized 19 home page for the guest, this home page being modified and updated as the guest's 20 requests for access to applications get approved; 21 determining whether approval is needed for a requested application and, if so, 22 sending by email a request for approval to the application administrator and receiving a

response from the application administrator; and

24	storing links to all applications for which the guest is approved, these links being
25	reflected in the personalized supplier portal home page which displays a list of links to al
26	of the applications for which the guest has been registered and authorized.
1	2. (Original) The process for managing business, technical and operational data as
2	recited in claim 1, further comprising the steps of:
3	defining 1 to n level approval cycles a user must go through to get authorized to
4	access an application;
5	logging in by a registered guest by inputting the guest's usereid/password once for
6	each session, as long as applications requested by the guest are in a same realm; and
7	invoking by a logged in guest any of their approved applications by simply
8	clicking the link to the desired application in the guest's customized home page.
1	3. (Original) The process for managing business, technical and operational data as
2	recited in claim 2, wherein the approval cycles are customizable for each application.
1	4. (Original) The process for managing business, technical and operational data as
2	recited in claim 2, wherein the approval cycles are defined for a section of an application,
3	providing a finer level of access control.
1	5. (Original) The process for managing business, technical and operational data as
2	recited in claim 2, wherein application specific registration fields are defined so that a
3	registration form, unique to an application, is displayed when a user requests access to an
4	application.
1	6. (Original) The process for managing business, technical and operational data as
2	recited in claim 2, wherein guests may bookmark applications for later access, further
3	comprising the step of prompting by an application a guest to enter their userid/password

4	for authentication against data stored in the GR data store when the application is
5	accessed using a bookmark.
1	7. (Currently amended) A data processing system for managing business, technical and
2	operational data which uses a single interface in a shared space environment over the
3	Internet comprising:
4	a supplier portal from which new guests indicate, using a Graphical User Interface
5	(GUI) of the supplier portal Web page, whether they are a registered user or not;
6	means for determining whether a guest is a registered user from input by the
7	guest, and if not a registered user, prompting the guest to select "Register" to link to guest
8	registration (GR) where they can obtain a Web userid/password that enables them to
9	register obtain user-level registration for any of global procurement applications available
10	under the supplier portal;
11	a GR data store storing guest information when a guest obtains a Web
12	userid/password;
13	a portal common registration (PCR) where information is stored in a PCR data
14	store throughout an application's approval cycle;
15	means for determining whether any applications have been authorized for a
16	registered guest and, if not, prompting the guest to register for restricted applications in
17	the PCR;
18	means for accessing information from the GR data store to automatically build a
19	customized home page for the guest, this home page being modified and updated as the
20	guest's requests for access to applications get approved;
21	means for determining whether approval is needed for a requested application
22	and, if so, sending by email a request for approval to the application administrator and
23	receiving a response from the application administrator; and

24	means for storing links to all applications for which the guest is approved, these
25	links being reflected in the personalized supplier portal home page which displays a list
26	of links to all of the applications for which the guest has been registered and authorized
